L6 ANSWER 1 OF 1 JAPIO (C) 2004 JPO on STN

ACCESSION NUMBER: 1982-183768 JAPIO Full-text

TITLE: 4-METHYL-5-(O-CARBOXYPHENYL)CARBAMOYLTHIAZOLE DERIVATIVE AND ITS PREPARATION

INVENTOR: KATO TETSUZO; HORIUCHI JIRO

PATENT ASSIGNEE(S): KANTO ISHI PHARMA CO LTD

PATENT INFORMATION:

ABSTRACT:

NEW MATERIAL:A 4-methyl-5-(o-carboxyphenyl)carbamoylthiazole derivative shown by the formulaI(R<SB>1</SB> is H or lower alkyl; R<SB>2</SB> is lower alkyl, aryl, amino wherein phenyl group may be substituted, lower alkyl, phenyl, or pyridyl). EXAMPLE: 2-Amino-4-methyl-5-(o-methoxycarbonylphenyl) carbamoylthiazole.hydrobromide. USE: Having antiphlogistic and analgestic action, antitumor action, useful as a drug. PROCESS: For example, an o-α-halogen-substituted acetacetamido-benzoic acid shown by the formula II(X<SB>1</SB> is H and X<SB>2</SB> is Cl or Br, or X<SB>1</SB> and X<SB>2</SB> are Br) is reacted with a thioamide shown by the formula III, to give a compound shown by the formulaI. The compound shown by the formula II is also a novel compound, and, for example, synthesized by reacting an o-

acetacetamidobenzoic acid with bromine in a solvent.
